QUANTITATIVE DETERMINATION OF STRATOSPHERIC AEROSOL CHARACTERISTICS

The requested cost revision proposal necessitated by a delay in receipt of data was submitted August 26, 1974.

Uncorrected S191 magnetic tape data has arrived for pass 18. We understand that the data must be corrected by the investigators and that the required correction algorithm is being prepared. We expected the algorithm in August, but further testing and documentation has apparently delayed delivery. We now expect the routine in September.

Bill Johnson has indicated that the over-exposed film not yet developed will not be processed as we requested. Hence we will not expect to receive or analyze the data. We had anticipated identification of aerosol levels with densities less than would normally be detected on normally exposed and processed film.
